Categories : Nanotechnology Proteomics. While the promise of the technology is intriguing, it is yet to be realized. We provide complimentary e-inspection copies of primary textbooks to instructors considering our books for course adoption. Chemicalgenomicsrepresentsanewapproachtotargetidentificationanddr The generation of chemical microarrays for large-scale drug discovery involves parallel synthesis of chemical compounds in a miniaturised format. In recent years, protein scientists have added NMR spectroscopy to their analytical toolbox. Similarly, the third section reviews current and next generation approaches to assay detection. FragmentchemicalmicroarrayThousandsofchemicalfragmentsaresynthesi such as the well established yeast two-hybrid and TAP tagging systems rely on a "fish and bait" approach. Immobilized chemical microarrays, such as the SMM and fragment chemical microarray technology, are particularly useful in probing binding partners or identifying targets.
